Request for Authorization to Plan (Notice of Intent)
PhD in Computer Science
University of Wisconsin-Milwaukee

Abstract

The University of Wisconsin (UW)-Milwaukee proposes to establish a Doctor of Philosophy (PhD) in Computer Science as a change from a concentration to a full major. The rationale for this program is that although Computer Science has offered a PhD in Engineering with a concentration in Computer Science for around 40 years, having a full major would make the program more visible to outsiders, reduce the burden of collection of performance indicators, and provide the faculty more autonomy and flexibility in making programmatic decisions specific to the discipline, which is substantially different than engineering. We do not anticipate any changes in tuition structure for this degree program or changes in courses. Students who complete the degree will be prepared for either Computer Research Scientists in Industry or Instructors at Post-secondary Institutions that conduct both teaching and research. According to the Bureau of Labor Statistics (BLS), the demand for Computer Research Scientists is growing faster than average (about 23% over the next ten years). The demand for Post-secondary instructors (across all areas) is growing at about 4% per year; however, the growth in demand for all computer occupations requiring a bachelor’s in Computer Science is expected to grow 10% over the next decade. In this document, we include information about market demand and enrollment demand for PhD in Computer Science and Computer and Information Science doctoral graduates at the state, regional, and national levels, which all show growing unmet needs. Growth in PhD completions has been about 33% in the region over the past decade, but static in the state. By contrast, market data at the national level shows an unmet market demand of over 85%, and even if PhD graduates from all related areas were hired instead, the unmet need exceeds 15%.

Program Identification
University Name: University of Wisconsin-Milwaukee (UWM)
Title of Proposed Academic Program: Computer Science
Degree Designation: Doctor of Philosophy
Suggested Classification of Instructional Programs (CIP) Code: 11.0701
Mode of Delivery: Single institution, taught as in-person instruction
Department: Electrical Engineering and Computer Science, within the Computer Science subgroup
Proposed Date of Authorization: June 6, 2024
Proposed Date of Implementation: Fall 2024

PROGRAM INFORMATION
Rationale
UWM currently has a college-wide PhD program in Engineering with a concentration in Computer Science. The proposed program would split the computer science portion of that existing program, to become a PhD in Computer Science, but not otherwise change program requirements or fees. The rationale for the
change is that creating a separate PhD major would improve program visibility, administration, and assessment. First, having a PhD degree that is, officially, in Engineering, rather than in Computer Science has at times caused the very existence of a PhD concentration in Computer Science to be in doubt, both when students look for degree programs and when ranking agencies assess programs. Historically the UWM computer science PhD has not been included in national rankings, such as those by US News and World Reports. We believe that a more specific degree name would end these doubts and aid in attracting top PhD student candidates to the program. Second, department faculty would like more autonomy in administering the program, including scheduling and evaluation of the PhD Qualifying Exam. Third, having a combined college-wide program has made it difficult to collect data on our (CS) students and graduates, as all PhD students in the college are, officially, in Engineering rather than Computer Science.

Computer Science is also a unique discipline from engineering, with origins outside of Engineering. Computer science is the study of the theory, design, implementation, and performance of computer software and computer systems, including the study of computability and computation itself. Computer science has its origins as an applied subdiscipline of mathematics in the 1960’s, but has developed its own formalisms for describing data and software methods that can be deployed on a growing variety of computing platforms. Careers in computing take on a variety of forms and now span every sector of the economy and every region of the world.

The undergraduate computer science program at UWM has been present in the College of Engineering since the college was founded – as part of a joint department of Electrical Engineering and Computer Science, that operates with two chairs and two distinct budgets. The undergraduate computer science program has the highest enrollment of the seven engineering programs at UWM (Biomedical, Civil, Computer Science, Electrical, Materials, Industrial, and Mechanical), and graduates approximately 100 students each year. The department plays a key role in the college’s mission to educate students to become creative problem solvers, and to act as a catalyst for improved economic development and quality of life in Wisconsin. With the fast-paced changes in computing, the department is critical to the college and university to achieve the strategic goal of anticipating and responding to market demands in order to produce graduates who are prepared to address and adapt to the changing needs of the marketplace and society.

At the graduate level, currently there is a long-standing, college-wide PhD program, spanning the various engineering disciplines of the college. Each engineering discipline that is part of this program defines a concentration with major coursework and qualifying exam questions from that discipline; thus, each engineering discipline functions, essentially, as its own individual program. Two programs, Mechanical Engineering and Electrical Engineering, have already taken action to create their own programs, by splitting from the college-wide program. With this Notice of Intent, we similarly plan to separate the CS portion of the college-wide PhD program into its own program. The need for this action is detailed in the following section.

**Need as Suggested by Market Demand**
Market data has been collected at the State, Regional and National Level. State data collected via Lightcast (see WI PhD CompSci Program_Overview_6480.pdf) for 2021 on target occupations predicts 226 Annual Openings in Wisconsin, corresponding to a one-year increase for 2022-23 of 23%. The highest growth, and highest median wage, was for Computer and Information Research Scientists, with a median wage of $67.30/hr (about $140K per year) and growth of 4.76%. One year job posting data shows about 200 unique employers and 820 unique postings. Top employers listing ads include pharmaceutical companies (Parexel and Pfizer) and Manufacturing (General Electric, Siemens, & Northrup Gruman). The number of openings is far below the number graduated PhD in Computer Science in Wisconsin. This data lists two institutions currently offering separate PhDs in Computer Science. (These institutions are UW-Madison and UW-Marquette). Together they graduated just 14 PhD students in 2021, all but one at UW-Madison (which uses CIP 11.101, while Marquette uses 11.701, as does UWM). The total completions was the same in 2012.

Regional data collected via Lightcast (see Midwest Compsci PhD Program_Overview_1096.pdf) for 2021, shows about 2800 regional openings versus 343 PhD in CS completions (meeting just 1/8th the advertised need), with a one-year growth of about 3%. Providing these graduates were 32 PhD CS granting institutions (but UWM CS was not included as our PhD is listed as Engineering). Regionally, the greatest growth has been for Information security analysts (4.39%), but the highest median salaries went to Computer and Information managers. Overall, 74% of the PhD CS completions (255 of 343) were at public universities, such as UWM and UW-Madison. The largest of these programs was University of Illinois Urbana-Champaign, which had 52 completions. Regionally, the ten-year growth in completions for non-distance PhD in Computer Science has been about 33%, far from saturating the need.

National data collected via Lightcast (see US Compsci Program_Overview_6724.pdf) for 2021 shows about 17,800 openings versus about 2000 PhD CS completions, with a one-year growth rate of about 4%. The largest number of openings was for Software Developers (about 71,000, with 5.1% annual growth, second only to Information Security which had 5.25% growth). Occupations with highest salaries were Computer and Information managers (with median pay about $160K per year), followed by Computer and Information research scientists (median pay about $134K per year). Providing PhD CS graduates were included, that would add 1000 PhD completions, leaving 75% unfilled, and even if PhD graduates from all related areas were hired, the unmet need exceeds 15%.

Need as suggested by Current Student Demand

Our program primarily includes in person instruction and research, while serving graduate students that work full or part time in the Milwaukee area (place-bound), those that come to work with specific faculty on funded research, and those have a desire to be in the Milwaukee area, as well as foreign students, who appreciate the affordability of the area. The program hires about 25 teaching assistants each term and it is possible for doctoral students to subsist on the stipends we offer. Enrollment in the Computer Science portion of the PhD has been 18 to 20 students (18, 20, 20, 20) each year for the past 4 years (2019-2022) and graduates about three students per year.
**Anticipated Program Outcomes:** Two or three PhD students graduate from the CS portion of the CEAS PhD program each academic year on average. We do not expect any significant changes in that number after the CS PhD program becomes a stand-alone program, as the goal of this endeavor is to increase our appeal and visibility to higher-caliber students, and to facilitate data collection for the CS PhD. Statistics such as the current enrollment, the annual completions, the average amount of student support provided to students, the average time to completion, etc. are not tracked separately for each concentration – and calculating them is laborious and thus rarely done.

**Overview of the Program**

The minimum degree requirement is 66 graduate credits beyond the Bachelor’s degree with minimum credit distribution as follows: 21 credits in the major area; 9 credits in an approved minor area; 6 credits in mathematics and/or quantitative methods; 9 credits of approved electives; 3 credit CEAS Graduate Seminar (Ethics and Engineering Communication); A minimum of 26 credits, excluding dissertation, must be at the 700 level or higher; 18 credits of doctoral thesis. A minimum of 33 credits (including thesis) must be completed in the Ph.D. program at UWM.

A maximum of 33 credits may be considered for transfer from prior graduate work, including a Master’s degree earned at UWM or elsewhere provided the course work taken falls within the appropriate areas and has earned a grade of “B” or better. Students entering the program without an applicable Master’s degree are limited to a maximum transfer of 9 credits for courses taken elsewhere.

**Learning Outcomes of the CS PhD Program (same as the current college-wide PhD Program):**

a. Apply advanced knowledge of mathematics, science, and engineering to solve complex problems.
b. Use modern tools or techniques to solve complex problems, conduct research, and analyze and interpret data.
c. Demonstrate proficiency and competency in the area of specialization.
d. Identify, formulate, and solve complex problems with an original and/or significant contribution to the field.
e. Demonstrate a familiarity with research in a related or complementary discipline.
f. Use quantitative methods appropriate to the field of research.
g. Understand academic, professional and ethical responsibility.
h. Communicate effectively via technical writing and oral presentations.

**METHODS OF ASSESSMENT OF OUTCOMES**

i. Outcome (a) is assessed through achievement of the Ph.D. Qualifying Examination.
ii. Outcome (b) is assessed through the dissertation proposal hearing.
iii. Outcome (c) is assessed through the Qualifying Examination and achieving a grade of B or higher in program of study.
iv. Outcome (d) is assessed in the preliminary examination (identify and formulate), in the thesis (solve) and in any published results.

v. Outcome (e) is assessed through achieving required B or higher average in selected course work (9 minor credits) and in the preliminary examination.

vi. Outcome (f) is assessed in the program of study’s inclusion of appropriate course work with a grade of B or higher.

vii. Outcome (g) is assessed in the required ethics and communication course(s) being developed with a grade of B or higher.

viii. Outcome (h) is assessed in the Dissertation Proposal hearing and the Dissertation Defense.

**Admission Requirements**

Admission standards will be the same as current admission standards for Engineering PhD, based on GPA in a related BS or masters degree in Computer Science, and GRE scores. See https://catalog.uwm.edu/engineering-applied-science/engineering-applied-science/engineering-phd/#requirementstext.

**Time to Degree Completion**

Time to degree completion varies significantly among students based on their prior preparation and whether they have completed a prior masters. UWM CS primarily admits both students who have prior masters in Computer Science and grants them advanced standing (up to 30 credits). A few students are admitted bachelors program, who thus must take around two extra years to complete the required number of credits. National data tracks time to completion based on the start of any graduate degree and this data shows that students at Very High and High Research universities, such as UWM, typically take seven and a half to nine years to complete a PhD. For example, they might take two years to complete a masters and five to six years to complete the doctorate afterwards. These dates are consistent with what we expect at UWM.

![Figure 1. Median Years to Complete PhD in Computer Sciences](image)

**Accreditation**

No specialty accreditation requirements are anticipated.

**Institution and University of Wisconsin System Program Array**
Alignment with Institutional Mission, Strategic Plan, and Existing Program Array
The current joint program, being focused on research and advanced education, clearly serves the broad UW–Milwaukee mission for discovery, research, and education, and supports the generation of new knowledge for the development and betterment of society. The new, split-off CS program will serve the same purpose.

Impact on Madison’s CS PhD Program: We do not expect that this program will have any effect on the CS PhD program in Madison. Our student pool is largely drawn from two groups. One is information technology professionals working in industry in Milwaukee. They choose UWM because it is convenient, and for them, Madison is too far to commute. The creation of a stand-alone CS PhD program will not affect these students. The other main group is foreign students, but our program and the program at Madison have different admission criteria (which is the current situation, and which will not change in the proposed program). As such, it is clear that the proposed program will neither produce unnecessary duplication within the UW System, not impact the program at Madison.

Anticipated Resources
The department has 9 tenure track faculty and two Teaching faculty and shares administrative and advising staff in CEAS. The department has at least one open position for another teaching faculty, anticipated to be filled by January 2023. These existing resources are expected to be sufficient to deliver the program, as no other changes to the structure or administration of program are proposed other than the elevation to a full major.
